

LifeStart[™] Neonatal bedside resuscitation unit

LifeStart[™] Neonatal bedside resuscitation unit

In the first few moments of life there can be a real dilemma for clinical staff. Despite the clear evidence outlining the benefits of Optimal Cord Clamping, most guidelines state that priority should be given to resuscitation of the infant.

The LifeStart[™] eliminates this dilemma. Designed with input from experienced paediatricians, midwives and obstetricians, its compact design allows the LifeStart[™] to be easily positioned close to the mother, enabling the infant's airway to be supported on a warm platform whilst leaving the umbilical cord intact. This helps to facilitate improved placental transfusion and smoother cardiovascular transition, providing the best starting life for the baby^{1,2}.

Built-in timer audio alerts a single, double and triple beep at 1, 2 and 3 minutes respectively, indicating the time passed with the umbilical cord intact.

A simple to use AlphaCore⁵ Patient Warming System provides a warm platform to maintain the infant's core temperature.

The Inspire rPAP TM system works in conjunction with LifeStart TM to provide the lowest imposed work of breathing resuscitation and stabilisation device⁵.

Providing optimal care to the baby within close proximity to the mother and birth partner, allows family members to stay together for mutual comfort, without having to be separated from their baby during this worrying procedure³. It can also enhance communication between the mother, birth partner and clinician, giving reassurance that their baby is receiving the best possible care³.

LifeStart[™] not only facilitates the best treatment for the baby but also helps bring some normality to birth at a stressful time for families.

Unmatched versatility

The LifeStart[™] brings together all the necessary equipment required to the bedside on a compact platform that can be adjusted in height to suit most types of delivery, including natural birth and C-section.

Suctioning* _____

Low flow venturi suction can be supplied as an optional accessory to mount on the LifeStart[™].

LifeStart[™] Timer _____

Built-in timer audio alerts a single, double and triple beep at 1, 2 and 3 minutes respectively to indicate how much time has passed with the umbilical cord still intact, without having to visually check the display.

Blender/Flowmeter*

Air/oxygen blender and flowmeter can be supplied as an optional accessory to mount on the LifeStart[™].

AlphaCore⁵ Patient Warming System*_

Optional accessory combines a LifeStart[™] mattress with a simple to use AlphaCore⁵ Controller to assist in maintaining the infant's core temperature during resuscitation.

Cylinder Holder

Stores Air and Oxygen cylinders for safe manoeuvrability.

Inspire rPAP[™] System*

Optional accessory comprising of an rPAP[™] Generator and dedicated rPAP[™] Driver that work in conjunction to create an effective, gentle approach to resuscitation and stabilisation.

LifeStart[™] perfect transitional care

Building on the standard of care provided by traditional resuscitation units, the LifeStart[™] is able to be positioned close to the mother to facilitate Optimal Cord Clamping whilst providing a gentler approach to airway support and effective hypothermia management.

For the best start

LifeStart[™] is a versatile bedside resuscitation unit, designed to accommodate all the equipment needed to provide babies the best start in life.

Optimal

- Facilitates Optimal Cord Clamping to improve placental transfusion²
- Provides stabilisation using optional Inspire rPAP[™] system to enable smooth cardiovascular transition¹
- Aids effective hypothermia management with optional AlphaCore⁵ Patient Warming System

Stable

- Compact platform on lockable casters for easy positioning
- Adjustable height to suit most types of delivery
- Air and Oxygen cylinder holders for safe manoeuvrability

Supportive

- Ergonomic design enables mother, birth partner and baby to stay close throughout treatment
- Provides comfort and maintains valuable bond between mother and baby
- Enhances communication between clinical team and parents³

Ordering Information, Technical Description and Specifications

LifeStart™* LifeStart™ (110V) LifeStart™ (230V)	LSU003 LSU003a	Dimensions	Footprint 65cm x 64cm Overall height 79cm (lowest position from floor level)
AlphaCore ⁵ Controller*		Weight	30kg
AlphaCore ⁵ Controller	IHC-1000	-	5
Neonatal Mattress*		Maximum patient load	10kg
Neonatal Mattress for LifeStart™	IHC-NCM9	Maximum additional equipment load	15kg
Accessories*		Power supply	200 VA~ 50/60 Hz
Injector Suction Unit (Low Suction)	LSA001		
Suction Jar, Serres type (requires LSA005/6/7)	LSA004	Input voltage	230 V~ or 110 V~
Rail Mount for Serres Suction Jar	LSA005	Adjustment	Resuscitation platform height
Suction liner, disposable, 1000ml (Case of 20)	LSA006		range from 70cm to 120cm from floor level
Suction tube, catheter connection, 1.8m (Case of 20)	LSA007	Timer	Audio alerts at 1, 2 & 3 minutes
Low Pressure Tubing - Yellow (1.0m length)	LSA008		Battery operated using $4 \times AA$ size 1.5 V alkaline
Inspire rPAP™ Arm	LSA011		cells (not supplied)
Blender, Low Flow, with flowmeter (LH), NIST	LSA020		
Rail mount for blender	LSA021		
Inspire rPAP™ Generator & Resuscitation Circuit (Case of 20)	IHC700/20		
Inspire rPAP™ Driver (Case of 3)	IHC805/3		
LifeStart™ Drape (Case of 20)	LSA106
