Three Mode Bed Exit Alarm

mobility is life 

Hill-Rom

The Hill-Rom “mobility is life” Concept

- Hill-Rom is committed to the concept that mobilizing patients early and supporting their independence improves life – in the hospital and at home.
- By enabling caregivers to provide efficient care, have more time at the bedside and get patients mobilized safely, positive outcomes can be achieved. Easier and more pleasant working conditions for caregivers allow more time for the dignified care of patients, which can accelerate recovery.
- Achieving this requires a commitment to continuous innovation, assistive technology, quality and clinical validation.
- Hill-Rom thinks, develops and manufactures based on this and always with the mission of enhancing outcomes for patients and caregivers.

Progressa™ Bed System

Advancing mobility. Accelerating recovery.

Enhancing outcomes for
patients and their caregivers:

Hill-Rom

Progressa Bed System - Redefining *Progressive Mobility*™ in your Intensive Care Unit

Enhancing outcomes for patients and their caregivers:

Breathe

Hill-Rom's Progressive Mobility Program helps caregivers progress patients from the flat/supine position through exiting the bed - safely, easily and more frequently.

Employs small, interventional activities easily accomplished at the bedside with a minimum number of caregivers.

Tilt

Sit

Stand

Move

StayInPlace™

Available only with Progressa Bed System
Moves with the patient to minimize patient sliding down
Decreases lift-burden for the caregivers and shear forces for the patient
